

CLARK PEDIATRICS

Norton Healthcare
and LifePoint Health

As an alternative to in-office services, our office has identified some situations in which telehealth services may be appropriate in providing care to your child during this pandemic. They are as follows:

- Diaper rash/rash
- Elevated temperature (100.4 or higher) with no other symptoms (for patients 2 years and older)
- Extremity pain without known injury
- Anxiety/depression
- ADHD
- Pinkeye without fever (for patients 2 years and older)
- Minor cough and congestion without fever lasting less than two weeks (pts 2 years and older)
- Allergies

Please call our office to inquire about scheduling a telehealth visit with one of our providers. Please note that a computer with a working camera, microphone and speaker are required.
